intrusiontruth

April 18, 2017

In the month that APT10 rocked the world, we believe it is finally time to get to the truth behind “Advanced Persistent Threats” – large-scale Cyber attacks stealing intellectual property from Western companies.

Global Hacking Operation is Targeting MSPs, Stealing Customer Data

A new report from PwC UK and BAE Systems details a sophisticated cyber espionage campaign by a well-known China-linked group, which gains access to customer data and intellectual property by infiltrating MSPs.

A sophisticated global hacking operation emanating from China has compromised managed service provider (MSP) networks and is targeting additional MSPs in an effort to steal sensitive data and intellectual property from enterprise customers.

APT10 targets Managed Service Provider (MSP) networks

We are busy investigating the largest APTs and will soon reveal the truth behind some of these intrusions. Meanwhile, you can read about APT10’s recent activity in PwC’s report, and their historical tools and techniques in FireEye’s report.

Check back in late April for more...
